

CRP 42

INSULATED SAFE FOR PAPER MEDIA

Security insulated Safe

EUROPEAN STANDARD

EN1047-1
VDMA 249991-1
S 120 P

In your company, fire is an ever-present threat; it can break out at any time: a careless act, an accident, an act of malice can lead to the destruction of irreplaceable documents.

When room temperature reaches 177°C, paper spontaneously ignites, even without any direct contact to the fire.

Fichet-Bauche has satisfied its clients' needs for many years, and **has learned how to control these risks.**

Meeting European Standards

In manufacturing each of its physical security products, Fichet-Bauche implements research and production techniques that strictly comply with the requirements of various European regulations. This involves very strict tests in approved laboratories, and dictates the resistance levels these products must meet.

The certification process and factory compliance inspection are crucial, since this guarantees

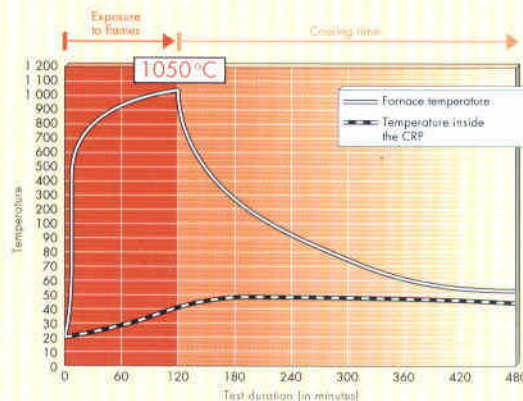

the quality and safety of the Fichet-Bauche products.

When you choose a European standard **CRP 42** fireproof safe, you are assured that all your paper documents will remain usable after a fire.

Furthermore, the drawers are independent; thus even if by chance one drawer remains open, the other drawers will be protected against the fire.

▶ **The RAL-RG 626/7 label plate stamped inside the first drawer, guarantees its 2-hour Paper fire-protection level, in compliance with fire standard S 120 P VDMA 24991-1, and European standard EN NF-EN 1047-1.**

▶ The CRP 42 has shown proof of its exceptional fire resistance in compliance with standard **S 120 P VDMA 24991-1**. When exposed to flames of more than 1000°C, the CRP 42 maintains your paper at a temperature not exceeding 170°C.

CRP 42 tested and certified

The CRP42 4-drawer **insulated safe** was specifically designed to store and protect all your important paper documents against fire. It provides optimised archiving capacity, with 2.4 linear metres of

suspended files and label holders on each drawer.

The sober grey RAL 7040 colour of the CRP will fit in harmoniously into any office environment.

S120 P the world's most stringent fire tests

1 . Fire Endurance Test :

This is the usual Furnace Fire Endurance test whereby the CRP 42 is placed during two continuous hours (120mn) in the furnace. After two hours the Firefile is removed from the furnace. The documents fitted in the CRP 42 remain safe and intact

2 . Thermal Explosion and Drop Test :

Thermal explosion : Pre-heating a furnace to 1000°, inserting the CRP 42 into the furnace. This will provide a "thermal explosion" resulting from the difference of temperatures between CRP 42

(normal temperature) and the furnace

Drop Test

After 45 minutes, the CRP 42 is removed from the furnace and dropped from a 9.15 meters height (as in a collapsing building) into a bed of stones.

The CRP 42 is then returned to the furnace for an additional period of 45 minutes.

14 hours furnace for cooling

Finally, the furnace is turned off and the CRP 42 firefile kept inside it till the surrounding temperature drops from 1000° to normal temperature, this taken about 14 hours.

Lock diagrams

A principal key lock for the upper drawer, locking all drawers, with a system for disconnecting the other 3 drawers (in an open or closed position).

Locking several possibilities

- 1 main keylock
- 1 main keylock + 1 control keylock per drawer
- 1 main keylock + 1 control combination lock
- 1 main keylock + 1 control combination lock + 1 control keylock per drawer

Dimensions in mm

	Height	Width	Depth
Drawer (inner)	268	387	600
Cabinet (exterior)	1,504	551	780

Capacities

Internal volume	249 litres
Linear suspended files	2.4 metres
Centre distance suspended files	330mm and 385mm

Weight

Total weight	385 kg
Wall thickness	56 mm
